DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see pages 1-3 of "Remarks/Arguments", filed March 14, 2005, with respect to Ito (Japanese Patent Publication 63-200102) in view of Stob (U.S. Patent 4991070) have been fully considered and are persuasive. The rejections of Claims 1-7 have been withdrawn.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with W. William Park on April 4, 2005.

The application has been amended as follows:

- Claim 9: "...a plurality of backlight elementss under the display panel, each of the backlight elementss having a light excluding portion and an opening portion through which light can be concentrated on the display panel, each of the backlight elementss having a rotation speed...gate line to which ~~the~~ a gate signal is applied"
- Claim 10: "...wherein the rotation speed of the **plurality of** backlight elementss is synchronized..."
- Claim 11: "...each of the backlight elementss..."

- Claim 12: "...each of the backlight elements..."

Allowable Subject Matter

3. Claims 1-7 and 9-12 allowed.
4. The following is an examiner's statement of reasons for allowance:

Independent Claim 1 recites an LCD device wherein a lamp is disposed under a display panel and includes a rotating reflection plate with an opening disposed around the lamp, whereby light is concentrated onto the display panel through said opening. The prior art fails to teach or suggest the combination of structural elements disclosed and claimed herein, and all subsequent claims are allowed due to dependency.

Independent Claim 9 recites an LCD device including a plurality of backlight elements under a display panel, wherein each has a light excluding portion and an opening portion through which light can be concentrated on said panel, has a rotation speed which enables light passing through said opening to be directed toward a portion directly under a gate line to which a gate signal is applied. The prior art fails to teach or suggest the combination of structural elements disclosed and claimed herein, and all subsequent claims are allowed due to dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The following US Patent 6815904 to Choi is considered pertinent to this application and fails to beat the priority date.
